

# Magnet-Sheet (Magnet Viewer)

Magnet-Sheet (Magnet Viewer) is the special seat which put magnetic fluid (gelatinous magnetic substance) between in film.

Pick up this seat on magnet, and can easily confirm the magnetic pole pattern which we cannot see.

The left pictorial image shows pattern of magnetic pole when multipole magnetized in the circumference region after having done 16 pole magnetizing in a face of a ring type magnet.

You can see 16 fan-shaped big magnetic poles when you pick up magnet sheet on this ring type magnet. In addition, you can see a lot of small magnetic pole of circumference part.

## Product Specification

- Size : 300 millimeters × 400 millimeters (Film sheet)
- Operation : Use for arbitrary dimension after cutting  
(Do not bend or fold.)
- Base Color : deep yellow
- Can delete magnetic pole pattern when traces face of a seat with magnet. Therefore can use repeatedly again and again.

\*This film sheet uses to see pattern of magnetic pole. Therefore this film sheet cannot measure distinction of N pole and S pole and intensity of magnetic field. In such a case please purchase magnetic measurement device such as gauss meter. Please refer to measuring apparatus catalogue of our company.
